### PROFESSIONAL SUMMARY

Senior Software Engineer with **7+ years of experience** designing and delivering scalable web and cross-platform mobile applications. Specialized in **React, React Native, Flutter, TypeScript**, and modern backend technologies. Proven track record of leading teams, shipping AI-powered features, and working closely with clients in **Telecom, Healthcare, Travel, and FinTech** domains. Strong problem solver with hands-on leadership and full-stack expertise, focused on clean architecture and long-term maintainability.

### CORE SKILLS

|                |                                                                                          |
|----------------|------------------------------------------------------------------------------------------|
| Frontend       | React, React Native, Flutter, Vue.js, TypeScript, JavaScript, MUI, Ant Design, Bootstrap |
| Backend        | Node.js, NestJS, Java, Python                                                            |
| Databases      | PostgreSQL, MySQL, MongoDB, SQLite, Firebase/Firestore, Supabase                         |
| Testing        | Jest, React Testing Library, Enzyme                                                      |
| DevOps & CI/CD | Bitrise, GitLab CI/CD, Jenkins, AWS (Lambda, EB, S3)                                     |
| Tools          | Git, Jira, Confluence, Postman, VS Code, Linux, npm, Yarn                                |
| Domains        | Telecom, Healthcare, E-Wallets, Travel Tech, AI-Driven Platforms                         |

### PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                             |                                              |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|
| Allion Technologies                                                                                                                                                                                                                                                                                                                                                                         | Associate Technical Lead                     |
| Maestro Concierge (Travel & AI Platform)                                                                                                                                                                                                                                                                                                                                                    | React Native, React, NestJS, MongoDB, OpenAI |
| <ul style="list-style-type: none"><li>Led rapid feature delivery based on weekly client feedback and evolving requirements</li><li>Worked across mobile, web, and backend layers to unblock teams and accelerate delivery</li><li>Performed peer code reviews and ensured adherence to best practices</li><li>Contributed to AI-powered trip planning and conversational features</li></ul> |                                              |
| Proxi Networking (Service Matchmaking Platform)                                                                                                                                                                                                                                                                                                                                             | React Native, Supabase, OpenAI               |
| <ul style="list-style-type: none"><li>Delivered features in short daily feedback loops with stakeholders</li><li>Implemented AI-based real-time summaries and transcription features</li><li>Mentored developers and maintained code quality standards</li></ul>                                                                                                                            |                                              |
| Aeturnum Lanka                                                                                                                                                                                                                                                                                                                                                                              | Senior Software Engineer                     |
| MonitoredRX (Healthcare Platform)                                                                                                                                                                                                                                                                                                                                                           | Flutter, Java, Swift                         |
| <ul style="list-style-type: none"><li>Built cross-platform mobile apps connecting patients and doctors</li><li>Integrated Bluetooth medical devices for real-time data capture</li><li>Participated in architecture decisions and code reviews</li><li>Wrote unit tests for business-critical logic</li></ul>                                                                               |                                              |

**aPriori CIS Application**

*React, TypeScript, MUI, React Testing Library*

- Developed a greenfield enterprise platform following strict client-defined best practices
- Built reusable UI components using Zeplin as the source of truth
- Delivered well-tested, maintainable frontend modules

**NDoc 2.0 (EMR System Revamp)**

*React, TypeScript, Jest, Ant Design*

- Contributed to requirement analysis, documentation, and feasibility studies
- Implemented modern UI using Figma designs
- Improved reliability with unit-tested reusable components

**Mitra Innovations**

**Senior Software Engineer / Software Engineer**

**Mobile Self-Care App (Telecom)**

*React Native, Firebase, Node.js, Vue.js, AWS, Bitrise*

- Developed a large-scale self-care app for a major telecom provider
- Implemented authentication, payments, VAS management, and third-party integrations
- Set up CI/CD pipelines and automated store deployments for iOS and Android
- Integrated analytics, push notifications, and CMS-driven dynamic content

**Mobile Payment Wallet**

*React Native, Verdaccio, Yarn Workspaces*

- Built a reusable e-wallet module distributed via a private NPM registry
- Designed CI/CD pipelines and integrated the module into production apps

**EDUCATION**

---

**Diploma in Web Engineering** — E-Soft Metro Campus, Sri Lanka

2018

**LEADERSHIP & IMPACT**

---

- Associate Technical Lead managing delivery and technical quality across multiple projects
  - Strong experience collaborating directly with clients and product stakeholders
  - Consistent focus on scalability, maintainability, and developer experience
